VIVYN SK

VR Developer · Game Developer

vivynsk.24csd@kongu.edu — +91 85319 59904 — GitHub — LinkedIn

Career Objective

Aspiring VR and Game Developer seeking to leverage strong foundational skills in Unreal Engine 5, Unity 3D, and real-time computer graphics to build immersive spatial computing environments. Aiming to apply structured software engineering principles and interactive design paradigms within a forward-thinking development team to create high-impact virtual experiences.

Education

Kongu Engineering College, Perundurai, Erode, India — *2024 – 2028*
B.E. Computer Science and Design — **CGPA: 7.68 / 10.0**

Petit Seminaire Higher Secondary School, Puducherry, India — *Class X*
SSLC — **Percentage: 75%**

Petit Seminaire Higher Secondary School, Puducherry, India — *Class XII*
HSC — **Percentage: 76%**

Areas of Interest

- Virtual Reality (VR) Development · Game Development · 3D Modeling & Animation

Technical Skills

Languages & Engines: Unity 6, Unreal Engine 5, C#, Java
Tools & Platforms: Blender, Figma, Visual Studio, Android, Canva

Projects

Stay Mad — 3D Rage-Baiting Game — Unity 6, C#, Android

- Developed an interactive 3D rage-baiting obstacle game featuring vehicle navigation, dynamic collectible coin mechanics, and custom victory/game-over conditions.
- Implemented responsive player locomotion (walking, sprinting, jumping) alongside dual-input support for both PC keyboard and mobile touch controls.
- Designed complete game-state UI screens (Main Menu, HUD, Settings, Credits) and integrated immersive spatial audio cues to elevate player engagement.

VR-Based Mental Wellness Simulation for Astronauts — Unreal Engine, C#, VR SDK

- Engineered a high-fidelity, immersive Virtual Reality simulation optimized to mitigate cognitive fatigue, stress, and isolation for long-duration space missions.
- Architected dynamic, responsive 3D environments utilizing custom interaction mechanics to elevate spatial immersion and user cognitive wellness.

ChronosEchoes: Relics of the Past Immersive Historical Exploration Game — Unreal Engine

- Engineered an interactive 3D historical exploration game in Unreal Engine 5 featuring sophisticated environmental storytelling and dynamic navigation.
- Leveraged UE5's Nanite and Lumen technologies to build micro-optimized, realistically lit historical assets, maintaining stable frame rates.

Technical Achievements

- **Secured 3rd Place** in a high-stakes **Intra-College Ideathon**, delivering a functional, innovative VR Based built upon real-world scalability and strict technical constraints.
- **Secured 3rd Place** in the **Intra-College Technofest**, pitching and demonstrating a fully playable historical exploration game with dynamic environmental storytelling and real-time lighting.
- **Smart India Hackathon (SIH) Participant:** Selected to tackle critical nationwide problem statements; collaborated in fast-paced software development sprints to build high-impact tech solutions.
- **Technical Competitions:** Earned recognition across multiple inter-college technical symposia, engaging in high-intensity, algorithmic problem-solving and rapid hackathon environments.

Leadership & Activities

- Served as the **Joint Treasurer** for the Coding Club, overseeing financial distribution and operational tracks.
- Organized and managed multiple large-scale technical events, synchronizing asset distribution and operational execution.
- Led cross-functional student teams during high-intensity hackathon programming cycles and project builds.
- Served as the school team **Captain** for both the Football and Cricket teams.
